Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: .the resin reservoirs. In sections taken through regions showing the transition toward the pithless type, an increase in the degree of lignification of the central parenchyma is seen. The fundamental tissues of this root are so closely packed with starch (Fig. 4) in all cases examined that cell walls are with difficulty made out. This necessitates the clearing of the tissues by the use of caustic potash solution. The starch grains are spheroidal or ovoidal in shape when simple, usually showing a central or nearly central hilum. In the larger grains, distinct fissures are to be seen, often of unusual dimensions. Layers are hardly discernible without special treatment. Very often the grains are aggregated, forming compounds of two, three or four parts. They are united along their flattened sides, and form two-, three- or four-lobed aggregations (Fig. 4). The fibro-vascular bundles (Fig. 5) offer some...
